TURBO TIMER

Red - 12V
Black - Ground
Orange - 12V IGN
Black - Circuits

Upon Installation make sure that the one Black Wire goes to 12V. The other side must go to the Ignition supply to keep the vehicle running. The Red wire must also be connected to Permanent 12V supply. The Black wire must be connected to a good secure Ground.

This unit is a smart timer . It can do a 30 second , 1 minute or a 1 minute 30 second timing.

Select the timing by pressing the button and counting the LED flashes.

1 = 30 seconds

2 = 1minute

3 = 1minute 30 seconds

NOTE !! the timer will only be activated after the vehicle has idled for 5 to 6 minutes.
